

Protozoa Cause Insomnia, Irritable Bowel, Prostatitis and Impotence

Initial consultation (2/08/2003)

History:

- John Klein, a 51 year old hotel manager, had suffered from an irritable bowel for over two years.
- His insomnia of two years refused to be touched by sleeping pills.
- He suffered from prostate problems.
- He had not been able to get an erection for over a month.
- Antibiotics had not helped.
- His triceps muscle was very painful.

Consultation by muscle testing:

- Two species of protozoa were found, *Toxoplasma gondii* and an unknown species of *Myxosoma* in his thalamus, colon, small intestine, muscles, prostate and testes.
- The 1.2% damage in his thalamus was causing the insomnia.
- No damage was found in the intestines, only irritation from the protozoa.
- There was 3.3% damage to the prostate and 4.2% to the testes.
- He had only 72% of normal testosterone levels causing his impotence.
- His left triceps muscle had 5.2% damage.
- He had only 15 of the 19 species of beneficial intestinal flora due to the use of antibiotics.

Recommended treatment:

- He used a **Dualzap** (replace with a **Harmonic Quad**) unit for five minutes and took **Proto**, one teaspoon three times a day, to kill the protozoa.
- He took **Protomune** to build immunity against protozoan reinfection.
- He took **Probio** to make all 19 species of intestinal flora thrive.
- He took **Musl Heal**, one-half teaspoon three times a day, to repair muscle damage.
- He took **PS-II**, one capsule three times a day, to heal his prostate damage. (**Perform** could have been used instead).
- He took **NF-O**, one-half teaspoon three times a day, to heal his testes.
- He took **Thal**, one teaspoon at bedtime, to repair thalamus damage and aid sleep.

Follow up consultation (3/29/2003)

Client report:

- His irritable bowel problem was gone.
- He still had insomnia.
- He had urinary urgency.
- He had pain in his penis.
- He had low sex drive.
- He was tired.
- He had sinus congestion.

Consultation by muscle testing:

- No parasites were found.
- The thalamus damage had decreased from 1.2% to 0.5%. The remaining thalamus damage still made

- sleeping difficult.
- This time adrenal damage was found which also contributed to insomnia. Low adrenalin levels at night caused the alveoli to close making breathing difficult while asleep. Adrenal damage was 1.3% and adrenalin production was 93% of normal.
- Prostate damage had decreased from 3.3% to 1.5%.
- Testes damage had decreased from 4.2% to 2.3%.
- Testosterone production had increased from 72% to 91%.
- Triceps muscle damage had decreased from 5.2% to 1.8%.
- ATP levels were down to 91% of normal accounting for the low energy levels.
- Saliva pH was 6.9.

Recommended treatment:

- Continued **Thal** at one teaspoon at bedtime, **Musl Heal** at one-half teaspoon three times a day, **PS-II** at one capsule three times a day, (**Perform** could have been used instead) and **NF-O** at one-half teaspoon three times a day.
- To repair the adrenal glands he took **Adren**, one-half teaspoon three times a day.
- He took **Lobelia**, two capsules as needed, to keep his alveoli open at night to aid breathing during sleep. (**Lobelia Ext.** could have been used instead).
- He took **Sinus Clear**, one-half teaspoon three times a day, to decongest his sinuses.
- To restore ATP levels and alleviate fatigue he took **Recharge**, one-half teaspoon three times a day.
- To alkalinize his body he took **Celery Seed Extract**, two teaspoons at bedtime.

Follow up visit (5/05/2003)

Client report:

- He had been sleeping well.
- His urinary urgency was gone.
- His penis pain was gone.
- His sex drive was normal.
- His tiredness was gone.
- His sinus congestion was gone.
- His arm muscle was much better.

Consultation by muscle testing:

- His thalamus damage had decreased significantly to 0.1%.
- His testes and prostate damage had healed.
- His testosterone level was normal.
- His triceps muscle damage had decreased to only 1.1%.

Recommended treatment:

- He continued **Musl Heal**, one-half teaspoon three times a day, and **Thal**, one teaspoon at bed time, for one more month.
- No further visit was scheduled.
